## SpreadSHEETS

We have started the task of turning this presanction into cloud-based software see www.supereconomics.ai/UCS/Calculator.php but it's a few months away from superseding the spreadsheet.

The following presentation is best consumed alongside the spreadsheet. This is quite a pact spreadsheet dating back several years. It will ask you to update, please say no to this.

Download Spreadsheet:
http://www.supereconomics.ai/Supereconomics-Book-2 S-RES-Presentation 8.40-(15th Nov 2020).xIsx | Short URL; www.supereconomics.ai/8.40.xlsx

There are many tabs, but it opens and begins as follows;

## TAB 1: Š-ŔÉŚTM Bathtub Graphics + DB

This is the tab that directly corresponds to this presentation

## TAB 2: H3) ŠÉŚ-v5 | S-World History 3b

Knows as UCS History 3, this document applies the Š-ŔÉŚTM equation to Malawi between 2024 and 2080. Starting with an Śpin of one and increasing by one a year up to 32 Śpins in 2055, it then sticks at Śpin 32 up to 2080. É starts at $90 \%$ and increases quickly and after 2032 is mostly $99.5 \%$, which is higher than is necessary.

## H3) ŠÉŚ-v5 | S-World History 3d

A condensed version of History 3b used for videos 43a2: About the Spreadsheet and 43a3: THE HOW - Š ŔÉŚTM Financial Engineering

## TAB 3: H3) Total Cash Flow \& GDP

This tab captures the total cash flow from each year; 2024 to 2080, adds it up and discounts it, before multiplying by 100, for 100 countries using the system, and a figure of One Thousand, One Hundred and Sixty-Six Trillion US dollars.

## TAB 4: H3) ŠÉŚv5 Jobs and Education3

In this tab we look at the number of companies in the network, how much each earns, how much labour is paid, how many personnel, how many Paid2Learn places and how much each Paid2Learn member is paid.

## and VIDEOS?

As of ( $15^{\text {th }}$ Nov 2020) we have not created a video for this precise presentation. But there are many previous videos on Š-ŔÉŚTM presented at the end of this chapter.

## Chapter 1.1

## Š-ŔÉŚTM FINANCIAL ENGINEERING Let us call it 'Supereconomics'

In this chapter, we tell the Š-ŔÉŚтM Financial Engineering story, which ends up with a network of 100 Grand Śpin Networks spending 1,166 trillion US dollars between 2024 and 2080. This is very powerful economics and not least because most of this growth occurs in poor countries like Malawi - on which this prototype is created. And as a part of this process, Grand Śpin Networks (Cities, Industry, Business, Prosperity) are created in less than Net-Zero, and in the case of Malawi, its dynamic comparative advantage is in creating Net-Zero industry and goods, to assist Africa in its Net-Zero ambitions, which right now are very limited.

With Net-Zero in mind, Book 3: Sixty-Four Reasons Why presents; The Elephant in The Room Question: Will the poorest 100 countries burn more and more carbon as they catch up with the West? The market says yes, yes, yes, unless something can be done. So, The Malawi Network seeks to make Net-Zero options for the African market less expensive than fossil fuel methods.

This is Malawi's dynamic comparative advantage, and it's important to note that its primary and biggest market by far is Malawi Itself. The S-World Network in Malawi needs not sell a single item outside the Malawi network for it to be successful.

In addition to the Net-Zero (or less than zero) ambitions, this plan is 'super' because we see the monopoly rents accrued are ingeniously spent in such a way that about $75 \%$ of all that money affords one or another Special Project.

There are 64 (Now 73) Special Projects so far in ecology, philanthropy, education, science and many other areas. Hence the name of Supereconomic book 3; Sixty-Four Reasons Why. Each special project is a reason why this is a good thing.

Lastly, for every poor person who dreams of escaping to the West or other rich countries SWorld Grand Śpin Networks have all that one should want, and throughout the mid-century will create jobs, housing, education et al. for billions of people, and will put a stop to economic immigration, indeed we may even reverse it, as Westerners wish to work and live in the new Grand Śpin Network economies.

## Chapter 1.2

## š-ŘÉŚTM SUPERECONOMICS In Cne Page. (The Monapoly Equation)

- Starting with say; $\$ 1$ billion, a network of businesses spends that $\$ 1$ billion, with $90 \%$ of recipients being other business in the same network.
- Now, halfway through the year, the network has $\$ 900$ million in new cash flow (created by the spin) which it spends again, also with $90 \%$ of recipients being other business in the same network, after which the network companies retain $\$ 810$ million. And by the end of the year, has spent $\$ 900+\$ 810$ million which equal $\$ 1,710$. We call this respending of the cash flow Śpin, and we are at Śpin 2.
- Spin again, to Śpin 3. means we need to spend all the money three times a year, so $\$ 900$ million, plus $\$ 810$ million plus $\$ 729$ billion equals $\$ 2,439$ in cash flow, and Śpin 4 adds $\$ 656.1$ million equals $\$ 3.090$ billion in cash flow.
- Moving forward a decade or more, with careful planning it is theoretically possible to increase the network to network spending to $99 \%$ and starting again with $\$ 1$ billion we can theoretically generate $\$ 62.76$ billion in cash flow in one year.

## To facilitate we need 4 actions;

1. Companies must make goods and provide services on time (Well Before Time Production) Assisted by the ten technologies.
2. Labour must be mostly paid in Network Credits so most of labours spending is with one network vendor or another.
3. Businesses must mostly buy from other business in the network, this is marshalled by the TBS ${ }^{\text {TM }}$ (Total Business Systems) mostly controlling the pricing, supply and demand of all business transactions.
4. The government are to be paid in output, in place of standard tax we propose Tax Symmetry, so at the beginning, the government choose which industries and so what products and services will be created. For example; social housing, infrastructure, solar arrays, administrators, hospitals, doctors and nurses, schools' teachers and universities, et al.

The most sophisticated scenario we have so far is called S-World UCS ${ }^{\text {TM }}$ History 3, which from 2024 to 2080 moves the world's poorest country Malawi from Zero to One percent of GDP generating about $\$ 23.32$ trillion in cash flow which generates about $\$ 11.66$ trillion in GDP. Consider this system used in 100 countries and we get to the figure of 1,166 trillion US dollars.

## SuperEconomics.ai

## Chapter 1.3

## The Š-ŔÉÉSTM CALCULATOR (2024)

Below we see an income statement that adds up; Investment, Šavings, The Suburb Sale ( $\triangle$ ), Aid, Foundations, Real Estate Sold, and Exports. This then gives us the figure (In Red) that goes at the begging of the Š-ŔÉŚTM Calculator (From Š-ŔÉŚTM Bathtub Graphics tab on the spreadsheet.

| $\mathbf{2 0 2 4}$ Ŕevenue + Šavings |  |  |  |
| :--- | :--- | ---: | ---: |
| $\mathbf{0 . 0 0 3 \%}$ |  |  |  |
| Investment | $\$$ | $4,000,000,000$ |  |
| Šavings | Zero |  |  |
| The Suburb Sale ( () | $\$$ | $1,050,000,000$ |  |
| Aid \& Foundations | $\$$ | $1,000,000,000$ |  |
| Real Estate Sold (Ŕ2) * | $\$$ | $262,500,000$ |  |
| Exports (Ŕ1) Trade | $\$$ | $5,250,000$ | (This is a Token Figure) |
|  | $\$$ | $6,317,750,000$ | Ŕevenue + Šavings |

The Š-ŔÉS ${ }^{T M}$ Calculator 2024 (From Š-ŔÉŚTM Bathtub Graphics tab on the spreadsheet) Below (in Red) we see Ŕevenue + Šavings. In this the first year this all Ŕevenue, we start to add Šavings from year 2.

| Ŕevenue + Šavings | É | Cash Flow | Śpin | Days | Spend By |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \$ 6,317,750,000 | 90.00\% | \$ 5,685,975,000 | 1 | 366 | 01 January 2025 |
| Year's Cash Flow | YCF: | \$ 5,685,975,000 |  |  |  |
|  | CFV: | 50\% |  | In Discounted GDP |  |
| Year's GDP |  | \$ 2,842,987,500 | 100\% | \$ 2,842,987,500 |  |
|  | GS: | 75.00\% |  |  |  |
| Gov Spending |  | \$ 4,264,481,250 |  | Companies: | 2,048 |
|  | LR: | 25\% |  | Cash Flow: | \$ 5,685,975,000 |
| Labour Receives |  | \$ 1,421,493,750 |  | CF per Company: | 2,776,355 |
|  |  |  |  | Personnel (32/co.): | 65,536 |
| Social Housing Villas | Built: | 1,185 |  | Paid2Learn (Trainees) | \$ 262,144 |
|  |  | 90\% | Increas | to Money Supply |  |
| LCR - Šavings |  | \$ 5,685,975,000 | Become | Next Years: | Cash Flow (2025) |
| LCŔ - The Law of Conservation of Revenue |  |  |  |  |  |

Above in yellow text, we see Year's Cash Flow. This counts how much cash flow is spent business to business (b2b) within the network in 2024.

Network company to Network company Cash Flow: $\$ 5.69$ billion
Companies: 2,048 | Cash Flow per company: $\$ 2.77$ million
Personnel: 65,536 | Paid2Learn (Trainees) 262,144 Social Housing Villas Built: 1,185
KEY PRINCIPLE 1 (YEAR 2-2024)
É: recycle Éfficiency - Sees $90 \%$ of 2024 cash flow spent with other companies or personnel in the same Network. Of the $\$ 6.31$ billion; $10 \%$ (being $\$ 632$ million) is lost as É leakage, and $90 \%$ remains in the network bank, spread among 2,048 different companies.
KEY PRINCIPLE 2
The Sienna Equilibrium (The Theory of Every Business) (Super Pareto

## Efficiency)

The Sienna Equilibrium plots the savings and revenue spending of all companies and their personnel so that at the end of a spin the money has changed hands in such a way so that it is evenly spread throughout the 2048 companies and their personnel. This can then be repeated to occur more than once when we introduce Śpin in 2025.

## KEY PRINCIPLE 3

Šavings - Where we see the balance of cash flow (\$5.69 billion) transferred into Šavings and then Revenue in the following year (2025).
We see this on the next page in the bathtub system graphic as Šavings + Ŕevenue $=\$ 6.32$ billion, but then all the money goes down the drain, losing $\$ 632$ million to leakage, but $90 \%$, (being $\$ 5.68$ billion) is saved and recycled. This is Śpin 1 , and so long as there is more income from the Suburb Sale than is lost to É leakage - written; ' $\Delta \geq E ́$ ', then the system is in profit. This profit at the end of 2024 becomes Šavings which turns into cash flow in 2025 shared by all the now 4096 different companies.

## Š $2023+$ Ŕ $\mathbf{2 0 2 4}$ (befor É leakage) = $\mathbf{\$ 6 . 3 2}$ billion

## \$632 million lost to É leakage

(2025)

## Š-ŔÉŚTM Malawi GŚN - History 3

Network company to Network company Cash Flow: $\$ 14.89$ billion
Companies: $4,096 \mid$ Cash Flow per company: $\$ 3.64$ million
Personnel: 131,072 | Paid2Learn (Trainees) 458,752 Social Housing Villas Built: 6,238

| $\mathbf{2 0 2 5}$ Ŕvenue + Šavings |  |  |  |
| :--- | :--- | ---: | ---: |
| $\mathbf{0 . 0 0 7 6 \%}$ |  |  |  |
| Investment | Zero | Malawi \% of Global GDP |  |
| Šavings | $\$$ | $5,685,975,000$ |  |
| The Suburb Sale ( () | $\$$ | $1,102,500,000$ |  |
| Aid \& Foundations | $\$$ | $1,500,000,000$ |  |
| Real Estate Sold (Ŕ2) * | $\$$ | $275,625,000$ |  |
| Exports (Ŕ1) Trade | $\$$ | $5,512,500$ | (This is a Token Figure) |
|  | $\$$ | $8,569,612,500$ | Ŕevenue + Šavings |

## Supere S ( o n o mics.ai

## The Š-ŔÉŚTM Calculator - 2025

Below in Red, we see 2025 Ŕevenue ( $\triangle$ from 2025) + Šavings (from 2024) is $\$ 8.57$ billion. Note the 'Spend By' has decreased to $11^{\text {th }}$ July and a new row that has appeared below it, a new row of Śpin - Śpin 2 . This becomes more and more obvious as we continue.

| Ŕevenue + Šavings | É | Cash Flow | Śpin | Days | Spend By |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \$ 8,569,612,500 | 91.00\% | \$ 7,798,347,375 | 1 | 191 | 11 July 2025 |
| \$ 7,798,347,375 | 91.00\% | \$ 7,096,496,111 | 2 | 174 | 01 January 2026 |
| Year's Cash Flow | YCF: | \$ 14,894,843,486 |  |  |  |
|  | CFV: | 50\% |  | In Discounted GDP |  |
| Year's GDP |  | \$ 7,447,421,743 | 98\% | \$ 7,298,473,308 |  |
|  | GS: | 75.00\% |  |  |  |
| Gov Spending |  | \$ 11,171,132,615 |  | Companies: | 4096 |
|  | LR: | 25\% |  | Cash Flow: | \$ 14,894,843,486 |
| Labour Receives |  | \$ 3,723,710,872 |  | CF per Company: | \$ 3,636,436 |
|  |  |  |  | Personnel (32/co.): | 131,072 |
| Social Housing Villas | Built: | 6,238 |  | Paid2Learn (Trainees): | 458,752 |
|  |  | 174\% | Increa | to money supply |  |
| LCR - Šavings |  | \$ 7,096,496,111 | Becom | Sext Year's | Cash Flow (2026) |
| LCR - The Law of Conservation of Revenue |  |  |  |  |  |

This new row is, the $91 \%$ of cash flow, that was recycled from the initial spending, it starts on $11^{\text {th }}$ July 2025 and is spent by the end of the year.

KEY PRINCIPLE 4

## Śpin

In 2025 Śpin is 2, and this means we spend the Šavings \& Revenue (minus É leakage) two times, by speeding up operations to initially conclude by 11th July 2025.
But then because É is $91 \%$, by the 12th July $202591 \%$ of Revenue + Šavings remains in the central bank.
And so, we can now re-spend that $91 \%$ ( $\$ 7.80$ billion) between 12th July and the end of the year.

This time when we calculate the Year's Cash Flow, we count the cash flow from both Śpin 1 ( $\$ 7.80$ billion) and Śpin 2 ( $\$ 7.10$ ) which equals $\$ 14.90$ billion.

Note the amount of companies has doubled from 2048 to 4096 which has diluted the cash flow per company but still shows a $35 \%$ net increase in average cash flow per company which rises from $\$ 2.77$ million (in 2024) to $\$ 3.64$ million (in 2025).

## SuperEconomics.ai

Further, note that we can increase cash flow per company by making fewer new companies.

## Š-ŔÉŚTM BATHROOM GRAPHIC 2-2025

Below we see the magic as we increase from Śpin 1 to Śpin 2, so by the 11th of July, all the cash flow from all 4096 companies has been spent. We see this phenomenon below as the money starting with $\$ 8.57$ billion which splits $9 \%$ to leakage and $91 \%$ back in the network bank. Then at Ś2 (Śpin2), it's doing it all again, then we add Śpin 1 and Śpin 2 to make a cash flow of $\$ 14.89$. And $\$ 7.10$ billion in Šavings for use in 2026.

Š-ŔÉŚ FINANCIAL ENGINEERING $\check{S}+\hat{R}=\mathbf{\$ 8}, 57$ billion

## 2025 Cash Flow = \$14.89 billion

Cash Flow = 7.79b
LCŔ $\quad$ (Šavings)
Law of Conservation of Revenue

Next Year (2026) $\rightarrow$
š = \$7.10 billion
Total Lost to É = \$1,47 bil.

And that's the trick, so long as É is high enough, the more spins, the more times we can spend the same cash flow in the same year!

## Š-ŔÉŚTM BATHROOM GRAPHIC 3 (2026)

This year we move to Śpin 3 and the cash flow is divided into three time zones; 1st Jan to 12th May 2026-13th May to 11th September 2026-12th September to 31st December 2026.
Below we can start to see the system growing exponentially. As we now add the cash flows in Śpin 1, 2 and 3 for $\$ 26.95$ billion in cash flow spent by the network that year.

## Š-ŔÉŚ FINANCIAL ENGINEERING

## 2026 Cash Flow \$26.85 billion

Š + Ŕ $=\mathbf{\$ 1 0 . 5 5}$ billion

## SuperEconomics.ai

Below we see this on the spreadsheet. In 2026 we start with Revenue + Šavings (in Red) at $\$ 10.549$ billion, É is $92 \%$, and $92 \%$ of $\$ 10.549$ billion is $\$ 9.70$ billion made before $12^{\text {th }}$ May 2026. Then the $\$ 9.70$ billion $x 92 \%=\$ 8.92$ billion made between $12^{\text {th }}$ May and $11^{\text {th }}$

September. And in Śpin 3 we see that $\$ 8.92$ billion $x 92 \%=\$ 8.21$ billion bade between the $11^{\text {th }}$
September to the end of the year. (From Š-ŔÉŚ' ${ }^{\text {м }}$ Bathtub Graphics tab on the spreadsheet)

| Ŕevenue + Šavings | É | Cash Flow | Śpin | Days | Spend By |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \$ 10,549,315,486 | 92.00\% | \$ 9,705,370,247 | 1 | 132 | 12 May 2026 |
| \$ 9,705,370,247 | 92.00\% | \$ 8,928,940,628 | 2 | 121 | 11 Sept 2026 |
| \$ 8,928,940,628 | 92.00\% | \$ 8,214,625,377 | 3 | 112 | 01 January 2027 |
|  |  |  |  |  |  |
| Year's Cash Flow YCF: \$ 26,848,936,252 |  |  |  |  |  |
|  | CFV: | 50\% |  | In Discounted GDP |  |
| Year's GDP |  | \$ 13,424,468,126 | 96\% | \$ 12,887,489,401 |  |
|  | GS: | 75.00\% |  |  |  |
| Gov Spending | \$ 20,136,702,189 |  |  | Companies: | 6144 |
|  | LR: | 25\% |  | Cash Flow: | \$ 26,848,936,252 |
| Labour Receives |  | \$ 6,712,234,063 |  | CF per Company: | \$ 4,369,944 |
|  |  |  |  | Personnel (32/co.): | 196,608 |
| Social Housing Villas Built: |  | 13,588 |  | Paid2Learn (Trainees): | 688,128 |
| 255\% |  |  | Increase to money supply |  |  |

| LCŔ - The Law of Conservation of Revenue |  |  |  |  |  |

A quick experiment, with the 'Years Cash Flow' (YCF), of $\$ 106$ billion, if we were to change to $E$ é $=97.5 \%$ we change YCF to $\$ 98.57$ billion, and at $95 \%$ we change years cash flow to $\$ 87.14$ billion which is still very respectable considering we started with just $\$ 6.32$ in 2024 and the networks central bank now holds $\$ 11.33$ billion in USD in cash as Šavings.

Network company to Network (b2b) company Cash Flow: $\$ 106.2$ billion
Companies: 24,576
Cash Flow per company: $\$ 4.32$ million
Personnel: 786,432

## MALAWI 2080

## Supereconomics History III - É = 99.5\% and Śpin = 32

By 2080 we see Ŕevenue + Šavings is at $\$ 278.2$ billion, which is Śpun 32 times, and each Śpin lasts between 11 and 12 days.

| Ŕevenue + Šavings |  | É |  | Cash Flow | Śpin | Days | Spend By |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Network company to Network company Cash Flow: \$8.21 Trillion
Companies: 327,680
Cash Flow per company: $\$ 25.1$ million
Personnel: 10,485,760
Social Housing Villas Built: 10,134,947
(From the Š-ŔÉŚS ${ }^{\text {TM }}$ Bathtub Graphics tab on the spreadsheet)

| 2080 Ŕevenue + Šavings |  |  | $\mathbf{1 . 0 7 3 0 \%}$ |
| :--- | :--- | ---: | :--- |
|  | Zero |  | Malawi \% of Global GDP |
| Investment | $\$$ | $225,663,332,783$ |  |
| Šavings | $\$$ | $48,407,349,256$ |  |
| The Suburb Sale ( () | Zero |  |  |
| Aid \& Foundations | $\$$ | $4,033,945,771$ |  |
| Real Estate Sold (Ŕ2) * | $\$$ | $80,678,915$ | (This is a Token Figure) |
| Exports (Ŕ1) Trade | $\$$ | $278,185,306,726$ | Ŕevenue + Šavings |
|  | $\$$ |  |  |

We now have 327,680 companies spending on average $\$ 25$ million a year taking Malawi from zero to one percent of global GDP - A 29x increase to the money supply. Making a grand total of $\$ 8.204$ trillion in cash flow in the year 2080.

But for this number to have any meaning we need to discount it to today's value.

## Chapter 1.4

## Discounting Š-ŔÉŚTM 2024 TO 2080 TO TODAY'S VALUE

So far there are three techniques for discounting, which we shall present after the 2024 to 2080 YCFs (Year's Cash Flows) display. For now, let's just look at 2080 using Discounting Technique 3. Adjust The Growth Variables.

## Discounting Technique 3. Adjust The Growth Variables.

To begin on the tab: H3) ŠÉŚ-v5 | S-World History 3b go to row 8 and we see four different growth input fields; 1. Global Growth: Default 102.5\% | 2. Malawi Growth - Trade: Default 105\% (not applicable as we only have token trade figures) |3. Malawi Growth - Real Estate (from Angel City 1): Default 105\% | 4. Malawi Growth - City Development (Grand Śpin Network - ( $\triangle$ ) The Suburb Sale): also has a Default of $105 \%$ (This (growth point 4) generates over ninety per cent of all income.)

If we turn all these variables to $100 \%$ (be careful not to enter 0\%) and look at the 2080 Š- ŔÉŚTM calculator results we get a YCF - Year's Cash Flow of $\mathbf{6 4 6 . 8}$ billion. Which from other tests seems to be the right figure for 2080.

| Year's Cash Flow |  | \$ | 646,821,920,784 |  |  | 365 <br> Days in a Year |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | CFV: |  | 50\% |  |  |  |
| Year's GDP |  | \$ | 323,410,960,392 |  |  |  |
|  | GS: |  | 75.00\% | 12.50 | to | 87.50\% |
| Gov Spending |  | \$ | 485,116,440,588 |  |  |  |
|  | LR: |  | 25\% | 12.50\% | to | 25\% |
| Labour Receives |  | \$ | 161,705,480,196 | Increase to money supply |  |  |
|  |  | 2949\% |  |  |  |  |  |
| LCR |  | \$ | 18,682,177,029 | ADDs TO | XT Y |  |
| The Law of Conse | Revenu |  |  |  |  |  |

Now we must/may need to take account of the possible GDP double-counting error presented in the first chapter of Harvard's David A. Moss's book. A Concise Gide to Macroeconomics.

We deal with this possible intricacy of the process by adding the CFV (Cash Flow Variable), which we can see above is set at $50 \%$. We get this figure from tab: The Sienna Equilibrium 1.06 Cell AI:211 which gives us a Cash Flow Variable of $66.163 \%$, and tab: The Sienna

Equilibrium 1.07 Cell AI:211) which gives a CFV of $47.738 \%$ for an average CFV of $=56.950 \%$, but there should be many more Sienna Equilibrium's. So, it made sense to add some leeway and $50 \%$ was a convenient number.

We may or may not need to apply the CFV, currently, we do, but if we did not, we would double the GDP figures and the amount of $4 / 5$ star villas (social housing) would increase from just over 10 million to just over 20 million.

## ‘Go No CFV (Cash Flow Variable) !!!’

## But for now, it stays. See tab: H3) Total Cash Flow \& GDP

First, we see that $\$ 8.2$ trillion in 2080 is worth $\$ 646.8$ billion in today's money and after the CFV we get GDP: $\$ 323.4$ billion

| 2042 | \$ | - | 2061 | \$ | - | 2080 | \$ | 646,821,920,784 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2080 Only: |  |  |  |  |  | \$ | 646,821,920,784 |
|  | Discounting Malawi |  |  | Š-RÉŚS ${ }^{\text {TM }}$ History 3 |  |  |  |  |
|  | Not Discounted |  |  | Malawi GŚN Growth 5\% |  |  | \$ | 8,204,082,483,521 |
|  | Discounted |  |  | Malawi GŚN Growth 0\% |  |  | \$ | 646,821,920,784 |
|  | \$ | 646,821,920,784 |  | Decre |  | 7.88\% | \$ | 50,996,390,888 |
|  | Cash Flow to GDP |  |  | The CFV (v=variable) |  |  |  |  |
|  | \$ | 646,821,920,784 | CFV: | 50\% |  | GDP: | \$ | 323,410,960,392 |
|  | \$ | 8,204,082,483,521 | CFV: | 50\% |  | GDP: | \$ | 4,102,041,241,761 |

Next, we increase the number of countries, states, provinces or counties from 1 (Malawi) to 100, mostly but not exclusively economically challenged locations. For a combined total of $\$ 32.3$ billion of GDP made and sold in 2080, discounted to today's money.

Lastly, we compare the discounted value of the 100-Strong Network of global GDP to The World Bank figure for 2018 global GDP to see that in 2080 the $\mathbf{1 0 0}$ strong Grand Śpin
Networks would generate $\mathbf{3 8 \%}$ of global GDP. Note however that this is misleading as SWorld is not competing for Global GDP it is adding GDP on top of the current figures.

## SuperE S (on n omics.ai

Note that this additional GDP will be made Net-Zero and responsibly and will assist the rest of the world with their Net-Zero aspirations. Plus of course, the other 73 special projects in ecology, philanthropy and science, presented in Book III - Sixty Four Reasons Why. See: www.angeltheory.org/64-reasons-why

Now let us look at the YCF - Year's Cash Flow for all the years from 2024 to 2080.

## Cash Flow and Discounted GDP from 2024 to 2080

Now let's see more of the spreadsheet tab: H3) Total Cash Flow \& GDP. What we see below is the value of cash flow each year from 2024 to 2080 copied from the H3) ŠÉŚ-v5 | S-World History 3b tab.

|  |  |  |  | Cash Flow |  |  | 2024-2080 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 2034 | \$ | 180,559,704,269 | 2053 | \$ | 1,908,662,235,155 | 2072 | \$ | 5,547,497,437,108 |
| 2035 | \$ | 221,041,648,096 | 2054 | \$ | 2,115,827,746,778 | 2073 | \$ | 5,826,177,139,597 |
| 2036 | \$ | 262,772,540,960 | 2055 | \$ | 2,322,603,780,468 | 2074 | \$ | 6,118,597,453,737 |
| 2037 | \$ | 305,124,961,846 | 2056 | \$ | 2,458,677,324,414 | 2075 | \$ | 6,425,474,067,699 |
| 2038 | \$ | 347,569,259,536 | 2057 | \$ | 2,598,598,977,445 | 2076 | \$ | 6,747,554,207,063 |
| 2039 | \$ | 389,688,563,209 | 2058 | \$ | 2,742,999,154,713 | 2077 | \$ | 7,085,618,841,083 |
| 2040 | \$ | 431,185,712,853 | 2059 | \$ | 2,892,474,879,905 | 2078 | \$ | 7,440,484,905,993 |
| 2041 | \$ | 471,882,760,113 | 2060 | \$ | 3,047,597,735,540 | 2079 | \$ | 7,813,007,560,030 |
| 2042 | \$ | 511,714,147,224 | 2061 | \$ | 3,208,920,785,137 | 2080 | \$ | 8,204,082,483,521 |
|  | \$ | 3,725,448,936,419 |  | \$ | 32,849,077,193,008 |  | \$ | 103,919,142,611,583 |
|  |  |  |  |  | 2024 to 2042: |  | \$ | 3,725,448,936,419 |
|  |  |  |  |  | 2043 to 2061: |  | \$ | 32,849,077,193,008 |
|  |  |  |  |  | 2062 to 2080: |  | \$ | 103,919,142,611,583 |
|  |  |  |  |  | 2024 to 2080: |  | \$ | 140,493,668,741,009 |

Above we see a grand Š-ŔÉŚTM History 3 total of $\$ 140.4$ trillion US dollars, but as before, for this number to have any meaning we need to discount it to today's value.
Using the same method as before 'the growth variable method' when we turn the 4 growth variables to $100 \%$ (to zero growth) we get the result of $\$ 23.32$ trillion.
$16.6 \%$ of the $\$ 140.4$ trillion US dollars in Š-ŔÉŚTM cash flow total.

| Discounting Malawi | Š-ŔÉŚS ${ }^{\text {TM }}$ History 3 |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2020 to 2080: |  | \$ | 23,321,291,435,916 |
| Not Discounted | Malawi GŚN Growth 5\% |  | \$ | 140,493,668,741,009 |
| Discounted | Malawi GŚN Growth 0\% |  | \$ | 23,321,291,435,916 |
| \$ 140,493,668,741,009 | Decrease Percentage | 16.60\% | \$ | 23,321,291,435,916 |

Before we move to the CFV and The 100 Club, there are two double checks, different ways of working out the same thing.

First, and the original discounting method is to calculate the value of the $10,118,720$ social villas built. The workings are on the H3) ŠÉŚ-v5 | S-World History 3b tab and are found a long way over on the right, in the column's EJ to EN starting on row 11 down to row 2798. Beginning with a cash flow of $\$ 150,000$ increasing to $\$ 597,899$ due to growth.
So, to calculate discounted cash flow and after GDP we can simply multiply the number of houses by the initial zero growth figure of $\$ 150,00$ for a total of $\$ 1.52$ trillion. (see cell D:2856)

| The Cost of all Home's Method |  |  | In today's money |
| :---: | :---: | :---: | :---: |
| Determined Cash Flow |  |  |  |
| Cash Flow Cost of Home | \$ | 150,000 |  |
| Amount of Homes |  | 10,118,720 |  |
| Cost of all Homes | \$ | 1,517,808,000,000 |  |
| Expand to all Spending |  | 16 | Only $6.25 \%$ is allocated to Spartan Homes Total cash flow in today's money |
| Total Cashflow 20242080 | \$ | 24,284,928,000,000 |  |

Once we have this number, we multiply it by 16, because of Special Project 20. Net-Zero FiveStar Social Housing receives exactly $6.25 \%$ of cash flow, therefore if we multiply by 16 ( $6.25 \%$ ) we shall get the discounted value for all cash flow. Which equals $\$ 24.28$ trillion which is close to the $\$ 24.32$ figure we got from the previous method.

## Lastly comes the World Bank 2018 method

From tab: H3) ŠÉŚ-v5 | S-World History 3b (From cell C:2859)

This method considers the Zero to One percent of GDP quality, and measures that independently. First, we get the value of global GDP in 2018 from the world bank; $\$ 85.8$ trillion. Then we estimate that on average a network that starts with zero percent of GDP and smoothly rises to one percent of GDP will have a value similar to the midpoint of the rise, thus we multiply the $\$ 85.8$ trillion by half of one percent $\times 0.5 \%$ giving us $\$ 439$ billion as the average per year. Lastly, we multiply that figure by the 56 years from 2024 to 2080 for $\$ 24,03$ trillion, which again gives us a similar ballpark figure to the previous two techniques.

## 

| World Bank GDP |  | $\mathbf{2 0 1 8}$ |
| :---: | :---: | :---: |
| World Bank GDP 2018 | $\$$ | $85,804,391,000,000$ |
| \% of Global GDP: |  | $0.50 \%$ |
| 1 Year - 0.5\% of GDP: | $\$$ | $429,021,955,000$ |
| 2024 to 2080: |  | 56 |
| Total GDP 2024 to $2080:$ | $\$$ | $24,025,229,480,000$ |

However, there is a problem, the figures from techniques 1 and 2, are set to be decreased by $50 \%$ by our friend the CFV - The David A. Moss Cash Flow Variable. Whereas this does not apply to the World Bank technique.

For this problem, let me introduce a quote from Paul Romer

What cities need right now is big plans, and Big Plans Must be Simple
Plans like the 1811 expansion of New York City, which was for a seven-fold expansion. You can't have a big plan that's also micromanaging a lot of details, it can't be complicated.

So, they have big plans and they have got to be simple, and you got to rely on people to fill in a lot of the detail."

So, we shall pass the baton on the CFV to Paul Romer and 'people, including David A Moss to fill in the detail.' But it's not a reason to be too concerned if we don't have to include the CFV our GDP figures will double, as will all special project allocations including special project 20, which jumps from ten to twenty million social housing 4/5 star villas built in Malawi by 2080. Note in general, if a potential error leads to making more money I sometimes leave it, only when the coin flip is potentially limiting do, I crack down on it. Of course, zero error is preferred.

## Chapter 1.5

## The 100 Club 2024 T○ 2080

## 100 Countries, States, Provinces and Counties

Finally, above we see the value of the Network GDP for 100 countries, (which we call the 100 (lub) and already have some strong candidates.

We are allowed to multiply by $\mathbf{1 0 0}$ for 100 countries following the Š-ŔÉŚTM Malawi prototype system because there is only low token trade-in History 3, with almost all the gains accruing in the inner Malawi Grand Śpin Network and the businesses it supports. Because there is no competition for trade, it is a nonzero-sum game. If each country, state, province can attract 3 Suburb Sale buyers, they will also have a result per the spreadsheet above.

300 Suburb sales may sound like a lot at the price of $\$ 1$ billion a year plus $5 \%$ annual growth but given the returns as seen above, it's conceivable that we reach this target, given the number of companies, countries, banks, sovereign wealth funds, university endowments, individual billionaires, foundations, NGOs and other than can afford this investment significantly exceeds 300 . So, it is theoretically a real possibility, a possibility that will be simulated and mapped out in S-World UCS™ as soon as the UCS-Š-ŔÉŚTM software v1 is completed. This task is now underway and will be attached to this paper/book summary soon.

# Chapter 1.6 

AND AT LAST, HERE WE ARE;
THE HOW
BEHIND THE MYTHICAL FIGURE OF $\mathbf{\$ 1 , 1 6 6}$ Trillion US Dollars
THE S-WORLD 100 CLUb - 2024 TO 2080 (Discounted ta taday's value)

And at last, here we are - the table below shows us where we got the seemingly mythical figure of $\mathbf{\$ 1 , 1 6 6}$ trillion US dollars, that we saw at the begging of the Supereconomic II book.

| 2042 | \$ 511,714,147,224 | 2061 | \$ | 3,208,920,785,137 | 2080 | \$ | 8,204,082,483,521 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ 3,725,448,936,419 |  | \$ | 32,849,077,193,008 |  | \$ | 103,919,142,611,583 |
|  |  |  |  | 2024 to 2042: |  | \$ | 3,725,448,936,419 |
|  |  |  |  | 2043 to 2061: |  | \$ | 32,849,077,193,008 |
|  |  |  |  | 2062 to 2080: |  | \$ | 103,919,142,611,583 |
|  |  |  |  | 2024 to 2080: |  | \$ | 140,493,668,741,009 |
|  | Discounting Malawi |  | Š-ŔÉŚSM History 3 |  |  |  |  |
|  |  |  | 2020 to 2080: |  |  | \$ | 23,321,291,435,916 |
|  | Not Discounted Discounted\$ 140,493,668,741,009 |  | Malawi GŚN Growth 5\% |  |  | \$ | 140,493,668,741,009 |
|  |  |  | Malawi GŚN Growth 0\% |  |  | \$ | 23,321,291,435,916 |
|  |  |  | Decrease Percentage |  | 16.6\% | \$ | 23,321,291,435,916 |
|  | Cash Flow to GDP |  | The CFV (v=variable) |  |  |  |  |
|  | \$ 23,321,291,435,916 | CFV: | 50\% |  | GDP: | \$ | 11,660,645,717,958 |
|  | \$ 140,493,668,741,009 | CFV: | 50\% |  | GDP: | \$ | 70,246,834,370,505 |
| Apply to |  | 100 | Countries / States |  |  |  |  |
| \$ 11,660,645,717,958 |  |  | 100 |  | GDP: |  | 166,064,571,795,800 |
| \$ 70,246,834,370,505 |  |  |  | 100 | GDP: | \$ | 7,024,683,437,050,450 |

We see the $\$ 1,666$ trillion figure above in the last row but one discounted and the potential double-counting problem addressed by the $50 \%$ CFV.

| Cash Flow to GDP The CFV (v=variable) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \$ 23,321,291,435,916 | CFV: | 50\% | GDP: | \$ | 11,660,645,717,958 |
| \$ 140,493,668,741,009 | CFV: | 50\% | GDP: | \$ | 70,246,834,370,505 |
| Apply to | 100 | Countries / States |  |  |  |
| \$ 11,660,645,717,958 |  | 100 | GDP: |  | 1,166,064,571,795,800 |
| \$ 70,246,834,370,505 |  | 100 | GDP: | \$ | 7,024,683,437,050,450 |

## VIDEOS

By now one must be thinking "there's something wrong here, it's just too big an economic free lunch."

Welcome to my world! I've been looking for the mistake for nearly 3 years now. This journey is now Supereconomic book two; Š-ŔÉŚTM and The Suburb Sale ( $\Delta$ ).

On this journey, I have made several videos.

The following two videos are the most recent but are not for the presentation just seen, rather they are for the previous version.

> 43a2). About the Spreadsheet: $\frac{\text { www.Supereconomics.ai/video/43a2 }}{29^{\text {th }} \text { July } 2020 \mid 7 \text { Minutes }}$ Tab) H3) ŠÉŚ-v5 | S-World History 3d
